Figure 1 consists of 12 histograms arranged in a single column. Each histogram represents the distribution of the number of non-zero elements in the vector x for a specific value of n , ranging from 10 to 120 in increments of 10. The x-axis for all histograms is labeled 'x' and ranges from 0 to 120. The y-axis is labeled 'count' and ranges from 0 to 100. The histograms show that as n increases, the distribution of x becomes increasingly concentrated around zero. For $n=10$, the distribution is broad and low, with a peak count of approximately 10. As n increases, the peak at zero becomes much more prominent, reaching a count of approximately 100 for $n=120$. The distributions for larger n values are also narrower, indicating that the non-zero elements are more tightly clustered around zero.
